

Therapists can upload video and photo instructions for the caregiver on how to perform daily exercises.

Visiting family members or substitute caregivers can be brought up to speed on their medication schedule quickly with MapHabit's easy to use interface.

Family members can communicate with professionals and caregivers to coordinate care using the communication tools available within the MapHabit app.

Proven Tools That Help Caregivers Provide Personalized Cognitive Support

The MapHabit System is a care coordination platform that utilizes visual maps to help individuals accomplish activities of daily living along with scheduling and communication tools that keep family members, caregivers and healthcare providers informed.

CHAT TOOLS

Hi. Just checking in to see how your Mom is reacting to the new medication. - Dr. Walker

Hello, Dr. Walker. Mom seems to be doing well. Her mood has lifted and she has not experienced any negative side effects.

That's great to hear! Let me know if there are any other issues that comes up!

DAILY MAPS

- 8:00 AM**
Call your son. Open the FaceTime app on your tablet to start the call.
- 8:30 AM**
Take one (1) pink pill with breakfast and a full glass of water.
- 9:00 AM**
Time for your morning stretches. Start with assisted lunges. Do 5 reps on your left leg.

Combining Technology and The Science of Habits to Transform Continuity of Care

MapHabit utilizes procedural memory, which is controlled by a region of the brain often spared during disease progression, to bolster independence, coordinate care and enhance quality of life for individuals and their caregivers through our patented visual mapping platform.

MapHabit's step-by-step visual maps tap the spared habit regions of the brain helping people with cognitive challenges to redevelop activities and routines. A paper based solution is also available for users.
